Abstract
Geometallurgical modelling of an orebody provides benefits to a mine by gaining a better understanding of the ore characteristics and how these affect the performance of the concentrator. With this knowledge, plant operating conditions can be adjusted to optimise throughput and recovery in

Orebody Modeling And Strategic Mine Planning

control in coal mines is to supply power plants daily with extracted raw material within certain coal quality constraints. On the example of a selected part of a lignite deposit, the problem of quality control for the run-of-mine lignite stream is discussed. The main goal is to understand potential fluctuations and deviations from production targets
