Bayesian Estimation Of Dsge Models

Dynamic stochastic general equilibrium (DSGE) models have become one of the workhorses of modern macroeconomics and are extensively used for academic research as well as forecasting and policy analysis at central banks. This book introduces readers to state-of-the-art computational techniques used in the Bayesian analysis of DSGE models.

Estimation of DSGE models (I, Reduced form) • Compute the steady state of the model (a system of non linear recurrence equations). • Compute linear approximation of the model. • Solve the linearized model: $y_t - \bar{y}(\theta) = T(\theta) (y_{t-1} - \bar{y}(\theta)) + R(\theta) \varepsilon_t$ where n is the number of endogenous variables, q is the

Bayesian Estimation of DSGE Models - Dynare

Koop et al. (2013) suggest a simple diagnostic indicator for the Bayesian estimation of the parameters of a DSGE model. They show that, if a parameter is well identified, the precision of the posterior should improve as the (artificial) data size T increases, and the indicator checks the speed at which precision improves.

Bayesian estimation of DSGE models: Identification using a ...

There exist several Bayesian approaches to estimate DSGE models. Most of these methods are fully invested in the LP, which implies likelihood-based estimation. The goal of Bayesian estimation is construction of the posterior distribution, $P(\theta | Y^T)$, of DSGE model parameters conditional on sample data Y^T of length T .

Bayesian Estimation of DSGE Models

We consider the estimation of linearized DSGE models, the evaluation of models based on Bayesian model checking, posterior odds comparisons, and comparisons to a reference model, as well as the estimation of second-order accurate solutions of DSGE models.

The key difficulty that arises when the Bayesian estimation of DSGE models is extended from linear to nonlinear models is the evaluation of the likelihood function. Throughout this book, we focus on the use of particle filters to accomplish this task. Our starting point is a statespace representation for the nonlinear DSGE model of the form

Abstract We survey Bayesian methods for estimating dynamic stochastic general equilibrium (DSGE) models in this article. We focus on New Keynesian (NK) DSGE models because of the interest shown in this class of models by economists in academic and policy-making institutions.

Point (i) contains a theoretical presentation of methods necessary to estimate and evaluate DSGE models. In particular Bayesian methods and state space models are presented together with Markov chain Monte Carlo algorithms (MCMC) In order to handle point (ii), we will begin with a brief introduction on Matlab use.

In this paper a simple New-Keynesian DSGE model is derived and then estimated for the Romanian economy. Some parameters are calibrated and others are estimated on Romania's data using Bayesian techniques. The model fit is evaluated and the effects of different types of shock are presented.
