provides an overview of a patient's symptoms and their intensity at a specific point in time. The Global Severity Index (GSI) is designed to help quantify a patient's severity-of-illness and provides a single composite score for measuring the outcome of a treatment program based on reducing symptom severity.

Brief Symptom Inventory (BSI®) - Pearson Clinical

The BSI Administration, Scoring, and Procedures Manual (Derogatis, 1993) provides normative data for four different samples, including non-patient adults, adolescents aged 13-17, adult psychiatric outpatients, and adult psychiatric inpatients.

Inventory

BSI 18 is the latest in an integrated series of test instruments that include the SCL-90-R, BSI (53 questions), and DPRS instruments.

Three symptom scales: Somatization, Depression, and Anxiety. Global Severity Index helps measure overall psychological distress level.
