In this book, Gary William Flake develops in depth the simple idea that recurrent rules can produce rich and complicated behaviors. Distinguishing "agents" (e.g., molecules, cells, animals, and species) from their interactions (e.g., chemical reactions, immune system responses, sexual reproduction, and evolution), Flake argues that it is the computational properties of interactions that account for much of what we think of as "beautiful" and "interesting."

The Computational Beauty of Nature by Gary Flake. The programs below are listed in the order in which they appear in the text. stutter interprets simple lisp and only understands car, cdr, cons, if, set, equal, quote, and lambda, but is still Turing-complete. Uses stop-and-copy garbage collection and has an adjustable heap size.

As a shameless sales plug, CBofN is about how nature can be appreciated in terms of simple computational processes. The book is in five parts (Computation, Fractals, Chaos, Complex Systems, and Adaptation) and explains each topic in terms of the others. The source code in this distribution contains many simple example programs of each topic.
