### Elements of Computer Network - GeeksforGeeks

Computer Networking continues with an early emphasis on application-layer paradigms and application programming interfaces (the top layer), encouraging a hands-on experience with protocols and networking concepts, before working down the protocol stack to more abstract layers.

### Elements of Computer Networking: An Integrated Approach ...

Basic elements of a computer network include hardware, software, and protocols. The interrelationship of these basic elements constitutes the infrastructure of the network. A network infrastructure is the topology in which the nodes of a local area network (LAN) or a wide area network (WAN) are connected to each other.

### What are the basic elements of a network?

A computer network is a collection of computers and other devices that use a common network protocol to share resources with each other over a network medium.

### List of computer network components

Computer networks components comprise both physical parts as well as the software required for installing computer networks, both at organizations and at home. The hardware components are the server, client, peer, transmission medium, and connecting devices. The software components are operating system and protocols.

### Computer Network Components - tutorialspoint.com

Computer network components are the major parts which are needed to install the software. Some important network components are NIC, switch, cable, hub, router, and modem. Depending on the type of network that we need to install, some network components can also be removed. For example, the wireless network does not require a cable.

### Computer Network Components - javatpoint

The nodes of a computer network may be classified by many means as personal computers, servers, networking hardware, or general purpose hosts. They are identified by hostnames and network addresses. Hostnames serve as memorable labels for the nodes, rarely changed after initial assignment.

### Computer network - Wikipedia

The computer works with digital signals. The communication channels usually use analog signals. Therefore, to receive data from a communication channel, the coded analog signals or any other encoded form are converted back to digital signals. This is called decoding.

Basic of Networking A computer network consists of a collection of computers, printers and other equipment that is connected together so that they can communicate with each other. Fig 1 gives an example of a network in a school comprising of a local area network or LAN connecting computers with each other, the internet, and various servers. 3

### Introduction to Computer Networking

Internet Protocols The Internet Protocol (IP) family contains a set of related and widely used network protocols. Besides the Internet Protocol itself, higher-level protocols such as TCP, UDP, HTTP, and FTP all integrate with IP to provide additional capabilities. Similarly, lower-level Internet Protocols such as ARP and ICMP also coexist with IP.

Bus technology. Ring technology. Star technology. There are other types of network technologies also like mesh technology. In bus technology all the computers are connected to single wire also called a bus. If any computer in the network stops working then others computers can still share files and data between them.
