(Principle) Description.

This short activity is done after Le Chatelier's Principle is covered in class. Students have already done the first lab, "Exploring Equilibrium," where they investigated temperature changes a little bit; here, they test their ideas and predictions about temperature changes in light of Le Chatelier's Principle.

This activity uses color-changing reactions to explore chemical equilibrium, including the nature of reversible reactions and the use of LeChatlier's principle. Students investigate the concentration of reactants and products, connecting these to the balance of forward and reverse reaction rates at equilibrium.

Equilibrium - Chem VLab+

Chemical equilibrium is a dynamic concept that challenges students to think about chemical reactions in a new way. Most chemical reactions do not proceed in one direction or give 100% yields of products; many are reversible, and both reactants and products are present at equilibrium.
