Optimization solution methodologies are based on simultaneous thinking that result in the optimal solution. The step-by-step approach is called an optimization solution algorithm.

Linear Optimization - University of Baltimore

Linear programming (LP, also called linear optimization) is a method to achieve the best outcome (such as maximum profit or lowest cost) in a mathematical model whose requirements are represented by linear relationships. Linear programming is a special case of mathematical programming (also known as mathematical optimization).

Optimization problems can usefully be divided into two broad classes, linear and non-linear optimization. We begin by discussing linear optimization. As the name implies, both the objective function and the constraints are linear functions. Linear optimization problems are also referred to as linear programming problems.
