The hydraulic system includes a pump, four-way directional valve, and a double-acting hydraulic cylinder. The model is created by assembling the components into a physical schematic using Simscape™ physical connections. Simulation results are displayed in the Simscape Results Explorer, where the piston travel and actuation force are displayed.

Engineers normally design these systems together because their operation is closely related. For example, once the indoor air supply is heated or cooled to an adequate temperature, the ventilation system distributes it throughout indoor spaces. In turn, the operation of air-handling systems influences the load on heating and cooling equipment.
