Object Oriented Modeling And Design

Intention of object oriented modeling and design is to learn how to apply object -oriented concepts to all the stages of the software development life cycle.Object-oriented modeling and design is a way of thinking about problems using models organized around real world concepts. The fundamental construct is the object, which combines both data structure and behavior.

Types of Models in Object Oriented Modeling and Design ...

Object-oriented analysis and design is a technical approach for analyzing and designing an application, system, or business by applying object-oriented programming, as well as using visual modeling throughout the software development process to guide stakeholder communication and product quality. OOAD in modern software engineering is typically conducted in an iterative and incremental way. The outputs of OOAD activities are analysis models and design models

Introduction to OOAD Object oriented analysis and design is a software engineering approach which models the system as interacting objects. Each object represents a system entity which plays a vital role in building of that system. Object Oriented Analysis (OOA) focuses on analysis of functional requirements for the system. Object Oriented Design (OOD) takes analysis model as input and produces implementation specification.

Mrs S G Bavachkar ATS SBGI MIRAJ 3 Analysis model is built to abstract essential aspects of application domain which contains objects found in application, their properties and behavior. Then design model is made to describe and optimize the implementation. Finally the design model is implemented in a programming language, database or hardware. Graphical notation is used for expressing object-oriented models.

Object-oriented system design involves defining the context of a system followed by designing the architecture of the system. Context – The context of a system has a static and a dynamic part. The static context of the system is designed using a simple block diagram of the whole system which is expanded into a hierarchy of subsystems.
